

Chemotherapy/Infusion Treatment Process

These 5 steps will guide you through the process

1 Phlebotomy

Draws your blood and sends it to the lab.

2 Nursing Assessment

If you didn't have a doctor's appointment before your chemo/infusion appointment, you will receive a physical exam to make sure you are well enough to receive your treatment.

3 Lab

The lab analyzes your blood samples and sends a report to the Pharmacy/Nurses. It normally **takes about 1 hour** to analyze your blood.

4 Pharmacy/Blood Center

After receiving lab results and a completed nursing assessment, it **will take approximately 30 minutes** to mix your drug and/or match blood products for your infusion.

5 Chemo/Infusion Appointment

You are now ready to receive your treatment.

Please show up on time at your phlebotomy appointment. Arriving late to your phlebotomy appointment is likely to increase your wait time in the chemo clinic significantly.

We listen to your suggestions and are committed to delivering timely service.
